EU legislation on packaging

10.5.2022

Antro Säilä, CEO of the Finnish Packaging Association

In this lesson you will learn about

- Why is the EU proposing so much environmental regulation on packaging?
- What are the main objectives for packaging regulation?
- What are the implications to EU citizens?

The World is facing huge societal challenges

- Climate change
- Population growth
- Pollution
- Metropolisation
- Scarcity of critical raw materials
- Globalization
- Aging population

There are important challenges to packaging in circular economy

1. Plastics
2. Plastics
3. Plastics

EU Circular Economy Package: objectives

2 objectives which go hand-in-hand

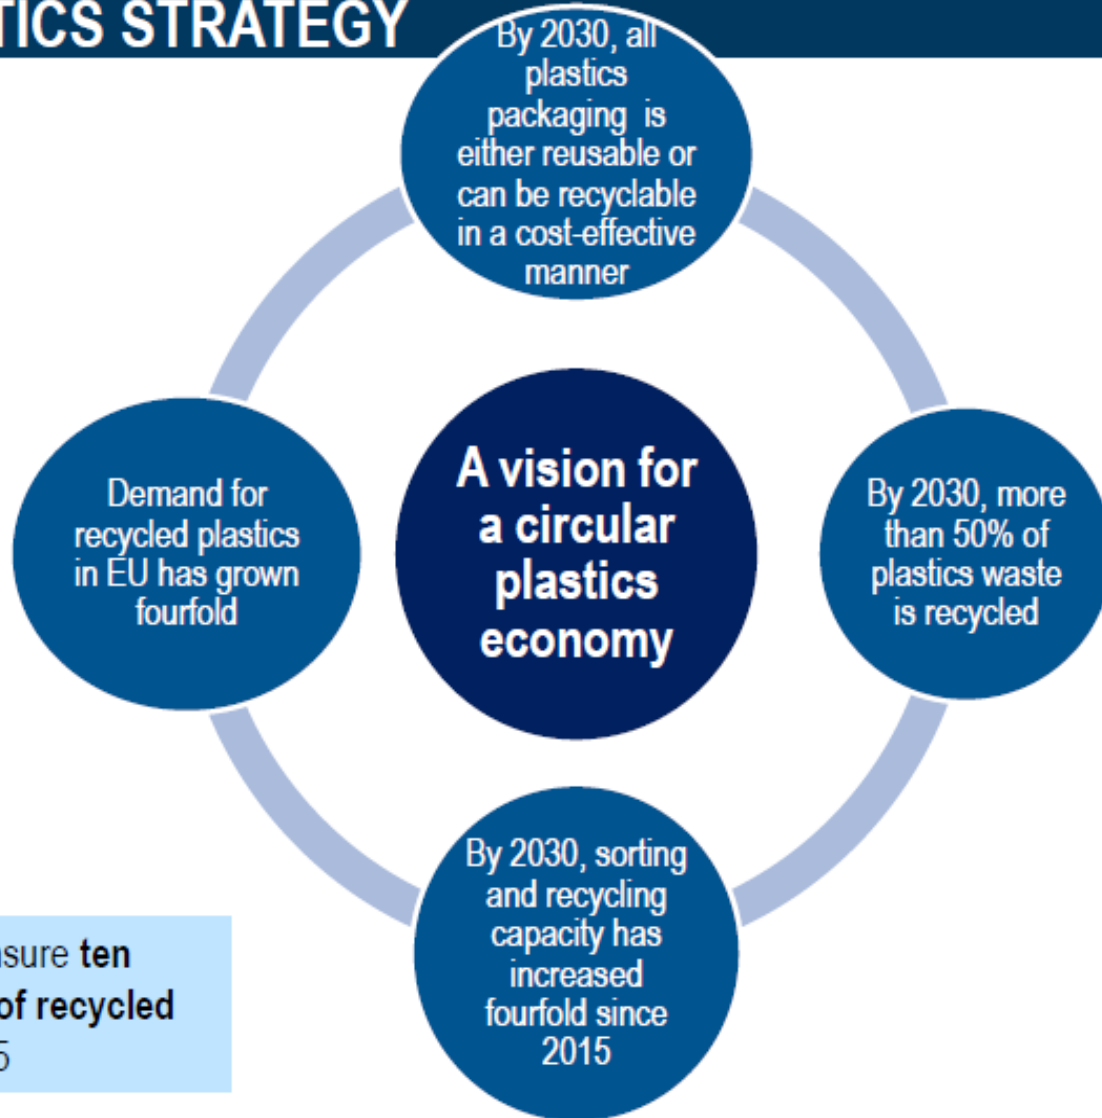

Use resources in a smarter, more sustainable way by keeping them in use for as long as possible, extracting their maximum value and recovering and regenerating materials at the end of life

Boost global competitiveness, foster sustainable economic growth and generate new jobs

CEP Action Plan EU PLASTICS STRATEGY

Marine waste on European beaches

Single-use plastic items

Single-use plastic items account for 50 percent of marine litter

Source: European Commission | Data for 2016

An aerial photograph of a circular garden with a central path and several smaller paths radiating outwards. The garden is filled with various plants, including star-shaped beds, circular beds, and rectangular beds. The surrounding area includes trees with yellow and green foliage, a tennis court, and a body of water.

EU Circular Economy and Packaging - implications

Circular Economy Package: Increasing recycling

Increasing recycling targets from
2020 to 2030:

- all packaging from 50 to 70%
- plastics from 22,5 to 55%

Single-use plastics directive (reducing plastic waste)

- Ban on certain single-use-plastics
- Increasing use of recycled material
- Extended Producer Responsibility
- Set rules for green claims

Green deal (reducing environmental impact)

- Decreasing packaging waste
- Increasing reusable packaging
- Recycled content in packaging
- Compostable packaging
- Positive potential of packaging to food waste?

Challenges in implementation of SUP-directive

Marking requirements (7 art.)

- More printing ink on cups? Turtles? Stock-keeping units multiplied => higher prices for consumers!

Single-use food packaging consumption reduction (4 art.)

- Demand is increasing, there are no plastic-free alternatives, but reduction is a must?!

Clean-up cost of public outdoor areas from municipalities to producers as part of extended producer responsibility (8 art.)

- Individuals throw trash in the environment, municipalities clean and producers pay?
- The biggest volume comes from cigarettes (butts) but the SUP-directive doesn't set any targets or measures to reduce that.

SUP-directive has good intentions which are not realistic

- The EU single market is broken into 27 national markets
- What about climate change?
- Competitive edge of EU companies?
- Health and safety of the consumers?
- Food loss?
- Investments?
- Less trash in the environment?

Key takeaways

- The packaging industry welcomes more ambitious environmental regulation. Adaptation takes time.
- There is a serious lack of reliable data about packaging.
- Politically ambitious but unrealistic objectives can result in:
 - Damage to the competitiveness of European companies
 - Shortage of investments in Europe
 - Increase of total environmental impact of the industry due to insufficient packaging – instead of targeted decrease
- Consumer empowerment is one key objective but the measures are still unclear
